# Software changes 20240618

- With this improvement some smaller bugfixes were done in the background

- Cooling tank can now works stand alone (no control of what happens after the cooling tank)

- You will see the primary flow temp (EZ360) is you are not working with an indoor sensor

New: Added new option have only cooling tank without heating or cooling system connected to it

- This is a new choice in the menu… Menu "only tank". This system is only cooling a tank, control of fan coils etc is **not done by CTC** but with external controller

- CTC controls the tank temperature not the temperature after the tank, towards the system.

- Define/cooling/cooling tank (Yes/No, new option, ONLY TANK

Def. Cooling	* Demo *
Cooling	Active
Common Heating/Cooling	No
Cooling tank	Only tank
Radiator pump (G2)	No
Room sensor	Yes
Type	Wire
Block cooling ext. config.	None

Bug fix: showed room setpoint for cooling even when room sensor wasn't used

- If no room sensor is used, you will see the primary flow temperature.

- This is for the heating/cooling temperature
